All papers undergo peer review.

See Author Guidelines for details on types of manuscripts.

Authors are responsible for content and accuracy of their articles. All views and conclusions are those of the authors of the articles and not necessarily those of the editorial staff or the University of Wisconsin Press. Trade names are used for the information and convenience of the reader, and do not imply endorsement or preferential treatment by the University of Wisconsin or any other public agency. The University of Wisconsin is an equal opportunity and affirmative action employer and educational institution. *Native Plants Journal* publishes research involving pesticides, but such pesticides are not recommended. All uses of pesticides must be registered by appropriate state and/or federal agencies before they can be recommended. Pesticides can injure humans, domestic animals, desirable plants, and fish or other wildlife if improperly handled or applied. Read the pesticide label before purchasing, and use pesticides selectively and carefully. Follow label directions for disposal of surplus pesticides and pesticide containers.

CORRESPONDENCE

Manuscripts must be submitted via the Internet. See the final pages of each issue for complete author instructions or visit <http://bit.ly/npjsubs>. Address all subscription, business, back issue, bulk order, and advertising inquiries to:

University of Wisconsin Press Journals Division
728 State Street, Suite 443
Madison, WI 53706-1428 USA
608.263.0668 uwpress.wisc.edu/journals

SUBSCRIPTIONS

Subscription rates are:

Institutions
US\$ 200 print and electronic
US\$ 170 electronic only

Individuals
US\$ 70 print and electronic
US\$ 60 electronic only

Foreign postage is \$31.

PERMISSION TO REPRINT

No part of this publication may be reproduced, stored in a retrieval system, transmitted, or distributed, in any form, by any means electronic, mechanical, photographic, or otherwise, without the prior permission of the University of Wisconsin Press. Many contributing authors and readers of *Native Plants Journal* are involved in restoration and reclamation of public lands. This activity, of a certainty, involves research on and utilization of native plants. But many additional endeavors involve native plants in one aspect or another.

Take for example my employment with the University of Idaho. I manage a project designed to domesticate plants for utilization in home and commercial landscapes. I regularly have direct communication with people who are interested in gardening with native plants. This work gives me a unique perspective on public perception of native plants. By watching public interest change over the past few years, I can say definitively that people are becoming more aware of nature in general and of native plants (especially their impact on pollinator populations). I believe that as a result of this changing perception, people are becoming more interested in and supportive of the native plant reclamation efforts that are a critical part of managing our public lands.

Logically, one result of this positive change in awareness is a shift in the political climate toward support of native plant conservation and habitat reclamation. I am not sure if this potential support for conservation efforts is yet showing up in dollar support for the work we do, but in the long run, this political atmosphere can't help but move forward the conservation and restoration work that we all know is critical to supporting a healthy biosphere.

I find it very rewarding to be involved in a movement that will restore our natural world and make it easier to complete development and research in support of improvements in native plant habitats. Given the dedicated personnel I commonly find within the native plant disciplines, I suspect I am not alone in this sentiment.

Keep up the good work everyone. And don't forget to send articles to the *Native Plants Journal* describing your work in the native plant arena. There is room for good quality writing on virtually all aspects of native plant production, utilization, and restoration. Please share your efforts and successes.

Dr Stephen Love
Editor-in-Chief
