OBJECTIVE AND CONTRIBUTIONS

The objective of Native Plants Journal is to provide a forum for dispersing practical information about planting and growing North American (Canada, Mexico, and US) native plants for conservation, restoration, reforestation, landscaping, highway corridors, and so on. Native Plants Journal solicits papers that are useful to and understandable by growers and planters of North American native plants and papers that contribute significantly to scientific literature. Therefore, contributions from scientists and workers in the field are welcome. If your information is within the scope of this journal and worthy of publication, our editors will be delighted to guide you in preparing your manuscript. All submitted papers are double-blind peer-reviewed by 2 reviewers to ensure the objective of Native Plants Journal is met.

SUBSCRIPTIONS, ADDRESS CHANGES, AND ADVERTISING INFORMATION

Annual subscription (2 issues): student US$ 25 (please enclose photocopy of student ID); personal US$ 30; library US$ 60.

For information about advertising, please contact:
University of Idaho Press | PO Box 444416 | Moscow, ID 83844–4416
phone | 208.885.3305 fax | 208.885.3301

To subscribe, purchase back issues, change an address, or make other inquiries, contact:

Native Plants Journal is published twice each year by the University of Idaho Press. © 2003 University of Idaho Press ISSN 1522-8339

PARTNERS

Partners with Native Plants Journal provide annual support of US$ 25,000. Sponsors provide annual support of US$ 5000.

Partner: USDA Forest Service, through State and Private Forestry, National Forest System, and the Southern Research Station.

On the Cover: A crop of Populus balsamifera L. ssp. trichocarpa (Salicaceae) rooted cuttings growing in containers at the University of Idaho Forest Research Nursery, Moscow. Photo by Kas Dumroese.
One perk of being editor of this journal is correspondence with other professionals around the world. I recently received a copy of a great book out of Italy dealing with propagation of their native trees and shrubs. I’d like to share with you a quote from the foreword to that book, written by Giorgio Cesari, the director general of the Agency for the Protection of the Environment. He writes about their Mediterranean natives,

> Abundant information is available for what concerns botanical and ecological characteristics, distribution, and occurrence, value and use of many species, but little is known about their natural and artificial regeneration. The absence of this information is particularly serious because it represents a lack of knowledge within a multi-purpose approach to forestation, restoration, and reclamation, and may explain the reasons why plantings are often limited to a narrow number of species which are easy to grow in the nursery. This practice greatly reduces levels of biodiversity and it is even more worrisome with regards to shrubs and minor hardwoods which are the great part of the Mediterranean woody flora.

I suspect the same can be true of many ecosystems in North America, where “we” take the easy way out by using plants that are easy to propagate and plant. Hopefully, you and Native Plants Journal will continue to show techniques for propagating a diverse mixture of plants so that the sites we impact will have the greatest biodiversity that reflects the natural, sustainable, functioning ecosystem.

In this issue, we address that to a degree using the dioecious Salicaceae as an example. Sure, rooted cuttings have long been a standard for propagation of this family, and nonrooted cuttings have been used in riparian restoration by the billions, but are we doing the best job we can in terms of biodiversity? Tom Landis leads the discussion about sex and the single Salix, and I think you’ll find that article most interesting.

Tom Landis has authored several articles for Native Plants Journal and serves on the editorial board. What you may not know is that Native Plants Journal was Tom’s idea, and through Tom’s commitment and funding, you hold this issue in your hand. Tom is retiring this December, having completed 30 y of service with the USDA Forest Service, about 20 of them as the National Nursery Specialist. He was honored this past year with 2 prestigious awards that reflect his entire career: the Society of American Foresters Technology Transfer Award and within the Forest Service, he received the Chief’s Award for Technology Transfer. One of Tom’s best programs is Forest Nursery Notes, a twice-a-year publication that has a huge bibliography for those of us interested in propagation of plants. It’s free for the asking; see the advertisement on the inside back cover.

As is customary with the fall issue, it’s time to thank those individuals who reviewed manuscripts this past year. It is a truly thankless job, but so necessary to make sure that the information presented is of high quality. A hearty thank you to:

Jerry Baskin
Karen Burr
Michael Collins
Stephen J Columbo
Tom Cook
Bijan Dehgan
Nancy Jo Ehlke
Thomas C Griggs
Diane Haase
Siti Nur Hidayati
Douglass F Jacobs
Thomas A Jones
Robert Karrfalt
E Durant McArthur

As always, thank you for your subscription. Tell a friend how much you enjoy Native Plants Journal.

R Kasten Dumroese

**CONTENTS**
Have a great idea for an article but don’t have time or need help writing? Please e-mail. We can help.

Two types of manuscripts are welcome:

- **General articles** include articles that are not research per se (lack strict experimental design and statistical analysis), but have important information for growers and planters of native plants. Articles could include new planting techniques, useful equipment, cultural techniques, habitat restoration, restoration techniques, production trends, technical information, descriptions of new species or cultivars entering nursery production, and so on. Propagation protocols are short, concise general articles detailing the specific methods used to propagate a particular plant.

- **Referred research articles** (and scientific reviews) must have sound application of scientific method, appropriate statistical analysis, and state how the research is important to growers and planters of native plants. Accepted papers will be published with a “Referred Research Article” designation.

All submitted manuscripts will be double-blind peer-reviewed by 2 reviewers to ensure the objective of Native Plants Journal is met.

**MANUSCRIPT PREPARATION**

**Format and style**

Include a cover letter indicating what type of manuscript is being submitted (referred research or general). Refrain from special formatting. Use of active voice is encouraged. All text except tables and figure captions should be double-spaced. The first page of the manuscript should have the title and author information (include full names of authors, their professional titles and affiliations, mailing and electronic addresses, and specify the corresponding author). Please print an abbreviated title and page number in the upper right corner of each subsequent page. Line numbering is not mandatory but appreciated. The second page should contain the title, abstract, and keywords but not author names. Abstracts should be double-spaced and brief (100 to 150 words or less) and emphasize results, usefulness, and practicality to growers and planters of North American (Canada, Mexico, and US) native plants. Include 3 to 7 key words not in the title. Include the reference you use for nomenclature (see below).

Follow the second page with the “Introduction, Materials and Methods, Results, Discussion, Conclusion, References,” or some other logical system as headings, followed by figure captions and tables. For matters of style, we follow Scientific Style and Format, The Council of Biology Editors Manual for Authors, Editors, and Publishers, 6th ed. (ISBN 0-521-47154-0). Use metric (SI) units with US units in parentheses and abbreviate all units, except those without numerical value (for example, “we measured parts per million and found 250 ppm nitrogen”). Use numerals for any countable amount (for example, 3 replicates, 2 populations).

**REFERENCES**

In the text, please list citations by date, and then alphabetically by author (for example, Smith 1986, 1997; Jones and Smith 1992; Smith and Jones 1992; Doe and others 1998). In the references section, list references alphabetically by author(s) and please do not abbreviate the name of the referenced journal. Examples:

**NOMENCLATURE**

Use common names with scientific names (including family names) in parentheses the first time used in the abstract and body of the paper; then use either the common or scientific name. Example, with common name: whitebark pine (Pinus albicaulis Engelm. (Pinaceae)). Example without common name: Phacelia rattanii Gray. (Hydrophyllaceae). Please use the Integrated Taxonomic Information System (http://www.itis.usda.gov), the PLANTS database (http://plants.usda.gov), or other suitable references. Please cite the reference you use for nomenclature.

**MANUSCRIPT SUBMISSION**

Manuscripts should be submitted electronically either as e-mail attachments or on a diskette or CD. In addition, please mail a single hard copy to the editor-in-chief.

Text and tables must be saved in Rich Text Format, Corel WordPerfect, or Microsoft Word. Graphics (graphs, drawings) should be in black and white and saved as individual jpg, tif, eps (preferred), SigmaPlot (preferred), or Adobe Photoshop files. Excel files embedded in manuscripts are unacceptable. Color slides are the preferred medium; images may also be provided as high-quality color photographs or digital images saved at a minimum resolution of 300 dpi at a minimum width of 10 cm (4 in), although larger-sized images are preferred. Include photo credits.

Please send manuscripts to: Kas Dumroese Editor, Native Plants Journal USDA Forest Service, SRS 1221 South Main Street Moscow, Idaho 83843–4211 telephone 208.883.2324 fax 208.883.2318 kdumroes@fs.fed.us

Please include the names and contact information for 2 potential reviewers of your manuscript.

Status of submitted manuscripts can be checked at http://www.nativeplantnetwork.org

**Disclaimers:** Individual authors are responsible for accuracy of their articles. Trade names are used for the information and convenience of the reader, and do not imply endorsement or preferential treatment by the University of Idaho, the US Department of Agriculture or its specific agencies, or any other public agency. The University of Idaho is an equal opportunity and affirmative action employer and educational institution. Native Plants Journal publishes research involving pesticides, but such pesticides are not recommended. All uses of pesticides must be registered by appropriate state and/or federal agencies before they can be recommended. CAUTION: This publication discusses the use of pesticides. Pesticides can injure humans, domestic animals, desirable plants, and fish or other wildlife if they are not handled or applied appropriately. Read the pesticide label before purchasing and using. Use all pesticides selectively and carefully. Follow the label directions for the disposal of surplus pesticides and pesticide containers.
